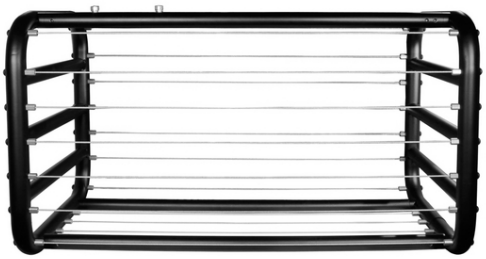
The Light Source
Gym Light Cage



The Gym Light Cage is an easy to assemble, protective cage for performance lights. The Gym Light Cage does not block light output.

The smooth, rounded structure has openings of less than 5 inches.

30" or 36" square end sections are formed from 2" schedule 40 pipe (2.375" OD). The ends are connected by four 1-1/2" schedule 80 pipe sections. A fifth pipe is provided for hanging fixtures.

Gym Light Cages with 30" end sections have 19 pre-terminated 1/8" aircraft cables which connect to pairs of internally threaded posts. Cages with 36" end sections have 27 cables. Stiffners for the cables are provided for lengths over 118"

Available in black, white, silver, or optional custom colors.

The Gym Light Cage ships flat, saving hundreds of dollars in freight charges. One package contains the straight pipes. The second contains the two end pieces, cable assemblies and hardware.

GYM LIGHT CAGE WITH MEGABATTEN

The MEGABATTEN has a 20 Amp Edison outlet and a 5 pin XLR every 16 inches. It has one 20 Amp circuit for lengths less than 102 inches and two alternating 20 Amp circuits for lengths of 102 inches or longer.

The MEGABATTEN has 12 foot leads for connecting to the building junction box through customer supplied metalic flex conduit.

The MEGABATTEN can be located in place of any of the aircraft cables.

Number of Outlets per length of Gym Light Cage
3 - 54"
4 - 70"
5 - 86"
6 - 102"
7 - 118"
8 - 134"
9 - 150"

10 -166"
11 -182"
12 -198"
